

Project Development Phase

1. Data Preprocessing Steps

Dataset Used

ElectricCarData_Clean (Global EV Dataset)

EVIndia Dataset (Indian EV Dataset)

Preprocessing Steps:-

- 1.Imported the datasets into Tableau.
- 2.Checked for missing values and removed or handled incomplete records.
- 3.Removed duplicate entries.
- 4.Standardized column names for consistency.
- 5.Corrected data types (Price, Range, Top Speed, Efficiency, etc.).
- 6.Verified brand and model names for consistency.
- 7.Removed unnecessary columns that were not required for analysis.
- 8.Created calculated fields where necessary (such as BodyStyle Count).
- 9.Verified data accuracy before creating visualizations.
- 10.Connected multiple datasets for comparative analysis.

2. Business Questions with Visualization

<u>Business Question</u>	<u>Visualization Used</u>
--------------------------	---------------------------

<u>What are the different EV cars available in India?</u>	<u>Bar Chart</u>
<u>Which EV brands have the highest top speed?</u>	<u>Horizontal Bar Chart</u>
<u>How does the price vary among EV cars in India?</u>	<u>Bar Chart</u>
<u>Which brands offer different body styles?</u>	<u>Packed Bubble Chart</u>

<u>Which brands use different PowerTrain types?</u>	<u>Filter + Bar Chart</u>
---	---------------------------
