

Customer Journey Map – Visualization Tool for Electric Vehicle Charge and Range Analysis

This journey map illustrates the steps an end user follows while using the EV Charge and Range Analysis dashboard to explore data and derive insights.

Stage	 1. DISCOVER User learns about the dashboard and accesses it.	 2. EXPLORE User browses through the dashboard and its visuals.	 3. FILTER User applies filters to view specific data.	 4. ANALYZE User compares and analyzes EV data.	 5. INSIGHTS User interprets insights and makes decisions.
 User Action	- User comes to know about the EV dashboard. - Opens the dashboard link.	User explores available charts, KPIs and visualizations.	User selects filters like vehicle model, manufacturer, year, battery capacity, etc.	User compares charging time, battery capacity, range and other metrics between EVs.	User interprets the results and derives meaningful insights.
 User Interaction	- Opens Tableau dashboard. - Views the overview page.	- Views different charts (bar, line, pie, maps). - Checks KPIs (range, charging time, etc.).	Uses dropdowns, date filters, and other controls to refine data.	- Uses charts and tables to compare EV models. - Analyzes trends over time or across categories.	- Notes trends and patterns. - Exports or shares insights if needed.
 Goal	Access the dashboard quickly and easily.	Understand the available EV data and metrics.	View specific and relevant data.	Compare performance metrics of EVs for better evaluation.	Make informed decisions based on insights.
 Positive Moment	- Dashboard loads successfully. - Easy to understand interface.	- Interactive and visually appealing charts. - Information is clear and well organized.	Filters work smoothly and update visuals instantly.	- Easy comparison helps identify best EVs. - Data is accurate and useful.	- Gains valuable insights. - Confident in the decision-making process.
 Negative Moment	- Slow loading if internet is weak. - User not sure what the dashboard provides.	- Too much information may feel overwhelming. - Some terms may not be clear for new users.	- Wrong filter selection may lead to no results. - Hard to find the correct filter.	- Limited data for some EV models. - Difficult to compare many metrics at once.	- Misinterpretation of data possible. - Need more context for some insights.
 Opportunity	- Improve loading speed. - Add a short dashboard overview or guide.	- Add tooltips and explanations for metrics. - Organize visuals logically.	- Add "Reset Filters" option. - Make filters more user-friendly.	- Update dataset regularly. - Add more comparison features.	- Provide data interpretation guide. - Add recommendations based on insights.
