

Project Design Phase
Proposed Solution Template

Date	07 July 2026
Team ID	
Project Name	Visualization tool for electric vehicle charge and range analysis
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Users find it difficult to analyze large electric vehicle datasets and compare EV performance, charging time, battery capacity, and driving range using raw data.
2.	Idea / Solution description	Develop an interactive EV Dashboard that visualizes electric vehicle data through charts and graphs. Users can filter data by vehicle model, manufacturer, year, and battery specifications to gain useful insights.
3.	Novelty / Uniqueness	Combines multiple EV performance metrics into one dashboard with interactive filtering, comparison charts, and real-time visual analytics for better decision-making.
4.	Social Impact / Customer Satisfaction	Helps consumers, researchers, and policymakers understand EV trends, promotes awareness of sustainable transportation, and improves user experience through easy-to-understand visualizations.
5.	Business Model (Revenue Model)	Freemium dashboard with premium analytics, subscription plans for organizations, enterprise licenses, and custom data analysis services.
6.	Scalability of the Solution	The dashboard can be expanded to include live EV charging station data, predictive analytics, IoT integration, AI-based recommendations, and support for global EV datasets.
